

## REFERENCE DATABASE

The following set of references focuses on the identification and the occurrence of seabirds. At the moment the list concentrates on the North Atlantic and Northeast Pacific. The aim is to grow this list into a worldwide, detailed, and useful resource for seabirders across the globe. The first sections naturally deal with Scilly seabirds since this is the home of our website. Next is a list of particularly useful books. The remaining sections as a whole are quite lengthy and list articles by seabird groups and families. Please email us with any corrections, a list of your publications, or about any publication that you think ought to be included in the list.
